components

Full technical
support

Easy
to fit

Smooth
movement

Hard-wearing
sliding solution

The heavy Duty 70 Series Industrial Sliding Door Gear is used for commercial and agricultural applications such as sliding doors on warehousing, stables and garages.

The smooth galvanised sliding door track range can be used for straight sliding configurations and is straightforward to assemble. Due to its large range of components, the 70 Series sliding door hardware can support doors weighing up to 600kg.

Series 70 Track components

Description	Code
1m Top track	70-70-1
2m Top track	70-70-2
3m Top track	70-70-3
4m Top track	70-70-4
5m Top track	70-70-5

Description	Code
1m Bottom guide	250-81-1
2m Bottom guide	250-81-2
3m Bottom guide	250-81-3
4m Bottom guide	250-81-4
5m Bottom guide	250-81-5

Code: 250-69

25mm Diameter bottom guide roller on flat plate
Code: 250-70

25mm Diameter double bottom guide roller, on flat plate
Code: 250-77

25mm Diameter brass guide roller
Code: 250-1298

Guide roller M12 with 25mm roller
Code: 250-268

Guide roller M16 with 34mm roller
Code: 250-1271

Typical panel configurations

Single track run

Double track run

Series 70 Straight sliding applications

Face fixing

Soffit fixing

Bottom guide options

Typical bottom guide configurations for sliding systems (suggestion only).

- A. Screw mounted guide roller fixed to timber door with under guide channel recessed into floor.
- B. Screw mounted guide roller fixed to metal door with under guide channel recessed into floor.
- C. Bottom guide **250-77** used with angle steel, which can also act as a weather strip.
- D. T-section metal bar fitted to door underside and used with bottom guide.
- E. Bottom guide **250-1271** fixed into floor using chemical resin. Door is then guided between wall and roller which allows it to be used with no under guide channel. Where guide channel is prone to fill with debris, this method is recommended
